CALCULATIONS

Approximate pressure distribution with Boussinesq to find $\Delta \sigma'$

1.) Consider long strip load

$b = 10 \text{ m}$

$Z = 11.5 \text{ m}$

$q_0 = 100 \text{ kPa}$

$I_0 = .505$

$\sigma_z = 50.5 \text{ kPa}^*$

2) Subtract unloaded region

$b = 5 \text{ m}$

$Y = 20 \text{ m}$

$Z = 11.5$

$q_0 = 100 \text{ kPa}$

$I_0 = .126$

$\sigma_z = 4(100)(.126)$

$= 50.4 \text{ kPa}^*$ note small influence of side fluc at shallow

3) Add Center Region +

$b = y = 5 \text{ m}$

$Z = 11.5 \text{ m}$

$\sigma_z = 4(100)(.072)$

$= 28.8 \text{ kPa}$

$\rightarrow 1) - 2) + 3) \approx 28.8 \text{ kPa}$
 $\Delta \sigma' \approx 28.8 \text{ kPa}$
