SOLUTION TIME Command

Synopsis:

The SOLUTION TIME command is used to specify the solution time history.

Syntax:

```
SOLUTION TIME FINal #.# INCrements ## ( RATio #.# )
( OUTput # : # : #)
```

Explanatory Remarks:

Since UD_scalar only performs linear analyses, a single solution increment is always sufficient.

Example:

For the linear analyses performed in UD_scalar, the following command will suffice:

```
solution time final 1.0 increment 1
```
